

# Introduction to structural equation modeling

---

Frank Pennekamp

03.11.2021

Department of Evolutionary Biology and Environmental Sciences

University of Zurich

# Introduction of the Swiss SEM team

- Dr. Frank Pennekamp (main instructor)
- Dr. James Grace (advanced topics and model clinic)
- Dr. Rachel Korn (course development)
- Dr. Noémie Pichon, Dr. Fletcher Halliday, Dr. Eliane Meier, Dr. Hugo Saiz, Dr. Debra Zuppinger-Dingley, Rebecca Oester, Annabelle Constance, Fabienne Wiederkehr (course development)

# Schedule

- Day 1:
  - General introduction to SEM to model ecological systems
  - Fitting SEMs to data
  - Model pruning, visualization and reporting
  - Discussion with James Grace
- Day 2:
  - Latent and composite variables
  - Interactions
  - Complex sampling designs
  - Spatial autocorrelation
  - Discussion with James Grace
- Day 3:
  - Self-study with possibility to meet with instructor(s)

# Overview

- What the course is about:
  - Global estimation with R package lavaan
  - Hands on exercises and live coding
  - We will work (mostly) with a single, ecological dataset
- What will not be covered
  - Local estimation of SEMs (with piecewiseSEM)
  - Advanced topics like incorporating random effects, feedbacks, temporal autocorrelation

# Learning objectives

- Participants understand the benefits and limits of SEMs
- Participants are able to fit, interpret and visualize a SEM
- Participants are able to apply SEM to their own dataset
